

LEED® Credits/Certification Information for Engineered Wood Products manufactured by Roseburg Forest Products

All grades of RigidLam® LVL (laminated veneer lumber) and all series of RFPI®-Joists (inclusive of LVL flanged I-joists and solid sawn lumber flanged I-joists) manufactured by Roseburg Forest Products contain no added urea-formaldehyde resins; therefore, it is Roseburg's opinion that RigidLam LVL and RFPI-Joists should qualify for the LEED - Indoor Environmental Quality EQ Credit 4.4: Low-Emitting Materials. However, the project specifier/end user is responsible to verify with LEED whether or not these materials will qualify for this credit.

Depending on the location of a project, RigidLam LVL and RFPI-Joists may qualify for the LEED - Materials and Resources MR Credit 5.1 or 5.2: Regional Materials.

More information can be found in the Roseburg publication "Green Products Guide" which can be ordered or downloaded from the Roseburg website: www.Roseburg.com.
